

## ABSTRACT OF THE DISCLOSURE

A compressor housing defines a motor accommodating chamber. The pressure in the motor accommodating chamber is  
5 equal to the pressure in a suction chamber. A first  
reservoir chamber is located in a discharge chamber. A  
second reservoir chamber is defined about the discharge  
chamber. A communicating passage connects the first  
reservoir chamber with the second reservoir chamber. A  
10 restrictor is located in the communicating passage. An oil  
return passage connects the second reservoir chamber with  
the suction chamber. A connecting passage connects the  
motor accommodating chamber with the suction chamber.  
Therefore, leakage of electricity is prevented.
